## *Combustion and Heat Transfer in Inert Porous Media*

---

Raymond Viskanta

### CONTENTS

15.1 Introduction .....	607
15.2 Physical and Mathematical Description of Combustion in a PIM ...	610
15.2.1 Physical Description .....	610
15.2.2 Mathematical Description .....	613
15.3 Heat Transfer in Porous Media .....	615
15.3.1 Effective Thermal Conductivity .....	615
15.3.1.1 Packed beds .....	615
15.3.1.2 Consolidated porous media .....	616
15.3.2 Convective Heat Transfer Coefficient .....	617
15.3.2.1 Packed beds .....	617
15.3.2.2 Consolidated porous media .....	618
15.3.3 Radiation Characteristics .....	619
15.3.3.1 Radiation characteristics of packed beds .....	620
15.3.3.2 Radiation characteristics of open-celled materials ..	621
15.4 Overview of Porous Medium Based Combustors .....	622
15.5 Premixed Porous Medium Combustors .....	624
15.6 Porous Medium Combustor–Radiant Heater .....	628
15.7 Premixed Porous Medium Combustors–Heaters .....	634
15.8 Concluding Remarks .....	637
Nomenclature .....	639
References .....	640

### 15.1 Introduction

Combustion processes in porous media are of great practical importance and are encountered in numerous technological applications and systems such

**FIGURE 15.2**

Schematic illustration of surface (a) and embedded (b) porous burners.
